INSTALLATION INSTRUCTIONS

DOOR FITTING HANGING GUIDE

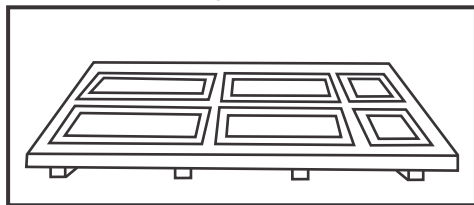

1. When hanging a door, allow adequate clearance for swelling of door or frame in extremely damp weather.
2. Avoid cutting doors down in size, use designated sizes. If width trim is required, to not trim over 5mm per side. Top may be trimmed 10mm and the bottom no more than 15mm.
Any door that is trimmed above these allowances will result in the cancellation of the warranty.
3. Be sure that jambs and stops are set perfectly square and plumb.
4. Ensure that the door is sealed on all 6 sides including top and bottom immediately after sealing with an approved base sealer.

DOOR HANDLING GUIDE

1. Avoid dragging doors across one another or across other surfaces.
2. Store on a level surface in a dry, well-ventilated building. Avoid stacking on end.
3. Cover doors to keep clean but allow air circulation.
4. Place doors in building site only after plaster or cement is dry.
5. If the doors are to be stored for long periods or on the job site, the entire door including the top and bottom edges must be sealed in order to prevent undue moisture absorption.
6. Doors should not be exposed to excess moisture, excessive heat, direct sunlight, and/or dryness.

DOOR FINISHING GUIDE

1. Adjust or align components if necessary.
2. Apply finish as soon as the door is fitted, but before final hanging. Cut outs for hardware must be sealed prior to installation. Jad Doors will not warrant any product that has been installed prior to finishing or that shows deterioration of wood or swelling due to finish breakdown.
3. Make sure all surfaces are sealed and finished, including top, bottom and side edges of the stiles and rails.
4. At least 3 coats of a solvent top quality paint or varnish are necessary, stains or linseed oil do not provide adequate sealing.
5. Finish on doors will deteriorate over time. All products require yearly inspection and potential additional coats of finish.
